# Aleksandr Efimenko

# **Software Engineer**

linkedin.com/in/aleksandr-efimenko mail@alexefimenko.com

# **Summary**

- Over 10 years of experience in developing, implementing and testing information systems, and business solutions.
- Over 5 years of experience in designing, developing, and programming applications, websites and databases;

#### **Skills**

**Programming:** JavaScript • TypeScript • C# • Python

Data manipulation: SQL Server • Entity Framework ORM • MongoDB

**Tools:** GitHub • Docker • Visual Studio • RabbitMQ **Web:** HTML5 • CSS3 • React • Redux • Bootstrap

# **Professional Experience**

#### C# Software Engineer | Reg.ru partner

March 2016 - Present

**Domain names system:** The system developed from scratch that collects and analyzes information about all domain names in the .ru zone (about 5,000,000 domain names), sorts and indicates potentially profitable domain names, buys and sells them automatically.

#### Main duties:

- Design and development of the software architecture.
- Installation and integration of modules of the system between each other and with the database;
- Diagnosis, testing, troubleshooting, and resolving issues with the software and the database;
- Development of data models and pipelines for transformation, and storing information about a significant number of domain names:

#### The system includes the following technologies:

- MS SQL database (more than 80 relational tables, more than 30,000,000 records);
- .Net core 3.1 Razor pages web application for managing and monitoring;
- REST API interface for CRUD operations processed by Entity Framework ORM;
- Docker containers for collecting data independently from external APIs;
- · Dashboard with main metrics using JavaScript;
- · Built-in authentication service.

## External IT consultant | the Joint-Stock Company "Project Development Institute No.1"

Industrial design and engineering company September 2017 - August 2019 (1 year 11 months)

**Accomplishments**: Provided advice on information system issues and modified to customer needs document management software for an organization with 100 employees.

#### Main duties:

- Information support, configuration of document management software "1C Document Management";
- Conducting technical studies at the request of the users on modification and improvement of the system;

- Testing and implementing business solutions, quality control, stability and system availability and updating the information base:
- Implementing maintenance procedures to maximize the efficiency of the information system.

Applied technologies: 1C Document Management • MS SQL Server

# Lead Engineer | the Joint-Stock Company "Project Development Institute No.1"

Industrial design and engineering company May 2015 - August 2017 (2 years 3 months)

**Accomplishments:** Implemented and modified to customer needs digital document management software for 4 organizations with a number of employees from 20 to 150. This software reduced the average time for approval of documentation within the organization from 7 to 2 days because of role-based routes, made generating new documents more than 3 times faster due to using pre-installed templates, and made searching for a document instantaneous.

#### Main duties:

- "1C Document Management" setup, maintenance and development business solutions using 1C programming language embedded in the "1C Enterprise" platform;
- Managing, monitoring and maintaining MS SQL Server databases, ensuring database security, stability and system availability. Maintaining databases backup and recovery infrastructure;

Applied technologies: MS SQL Server • 1C Document Management

# Technical Support Engineer | FGKU North-West territorial administration of the property relations

Real estate management December 2010 - April 2015 (4 years, 5 months)

**Accomplishments:** Made a significant contribution to increasing the productivity of the organization by proactive monitoring, optimizing and upgrading hardware, software and related computer equipment;

• Implemented and customized digital document management system "E1 Evfrat", which helped the company boost cooperation between all departments and optimized the workload of the staff.

#### Main duties:

- Research, diagnosis, troubleshooting, and resolving customer issues with software and hardware;
- Maintaintanance and co-ordination local and global networks hardware, software and related computer equipment;
- Installation, maintenance, troubleshooting and upgrading database server hardware and software;

#### **Education**

#### **Baltic State Technical University**

September 2008 - June 2014, Saint Petersburg, Russia

**Degree:** Specialist's degree

Qualification by WES evaluation: Bachelor's and master's degree in Engineering

Course of study: Aircraft control systems Engineering

## Certifications

"1C Enterprise" platform professional, 2015 • "1C Document Management" professional, 2016 • MS SQL Server Developer 2019 • C# Developer Professional 2020 • Google IT Automation with Python, 2022
